

Super Strong Water & Air tight Tape

No.693

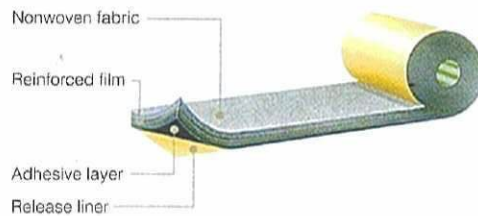

~The first name in flashing tape for professional home builders~

Introduction

NITTO's unique BUTYL TAPE NO.693 has been rapidly replacing rubberized asphalt tapes as the preferred method for sealing against air and water penetration around Windows, Doors, and Skylights. The advantage of NO.693 such as containing NO asphalts, VOCs or solvents resolve the sick house problem and the cosmetic damage by asphalt contaminations.

This peel and stick product has a non-woven fabric backing on top of a reinforced film for additional durability and easier handling.

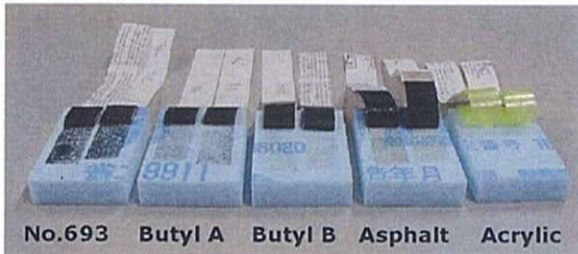

Structure (single-coated adhesive type)

Features

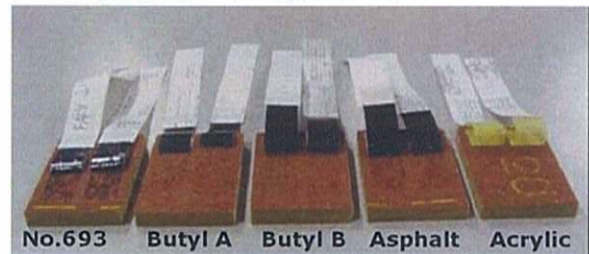

- No asphalts, VOCs, or solvents
- Excellent adhesion to Plywood, Engineering wood and Polystyrene insulation wall.
- Exceptional quality under extreme temperatures
- Excellent longevity of adhesion comparing to asphalt system

<Adhesion to Polystyrene insulation wall>

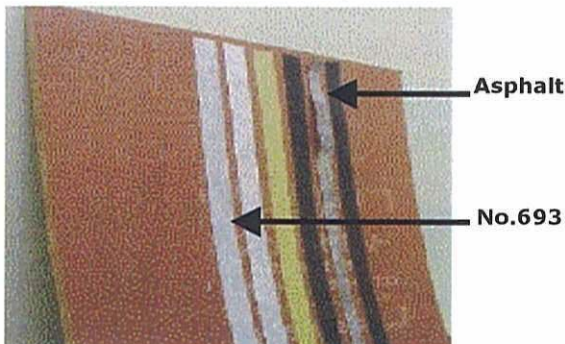

No.693 shows heavy cohesion failure upon removal.

<Adhesion to Engineering wood>

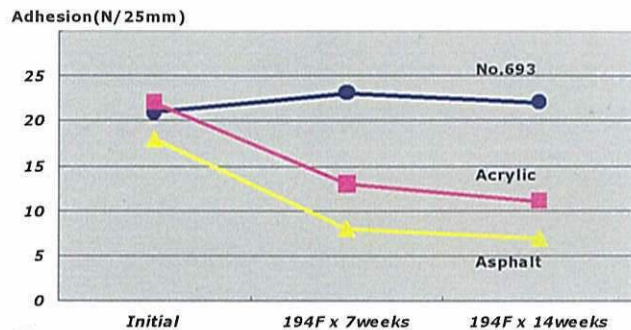

No.693 shows heavy cohesion failure upon removal.

<Stability under extreme temperature>

No.693 shows excellent stability while asphalt tape waves. (32F-104F 2 cycle)

<Longevity 194F degrees x 14 weeks (=20years) >

194F x 14Weeks accelerated test is assumed to be equivalent to 20 Years.
